DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a catheter assembly with an elongate operative element having a relatively stiff initial section, classified in class 604, subclass 264.
- II. Claim 33, drawn to a method of preparing a catheter system for use including positioning a first combined connector at an extended position and connecting a second combined connector to the first combined connector while securing the proximal portion of a sheath to a proximal portion mount of a drive assembly, classified in class 604, subclass 95.01.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as not requiring the particulars of invention II. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
